

Pranav Srusti

+1 412 452 1653 | pranav.srusti@gmail.com | [LinkedIn](#) | Pittsburgh, PA

Engineer with nearly 5 years scoping, prioritizing, and shipping under real business constraints such as regulatory deadlines, seasonal launch windows across backend, frontend, and data pipelines. Now formalizing that instinct for product decisions through a masters at Carnegie Mellon University.

EDUCATION

Carnegie Mellon University

Aug 2026 - Dec 2027

Master of Information Systems Management (MISM)

Pittsburgh, USA

- **Achievement:** Recipient of 25% Merit Scholarship.
- **Enrolled Coursework (Fall 2026):** Product Management, Design Strategy, Negotiation, Economic Analysis, Intermediate Database Management, Python for Software Development, Managing Disruptive Technologies.

Vishwakarma Institute of Technology, Pune

Aug 2018 - Jun 2022

B.Tech Electronics and Telecommunication, Electronics and Telecommunication (GPA: 3.92)

Pune, India

Semester Exchange: Hof University of Applied Sciences, Germany (Computer Science)

- **Achievement:** Achieved perfect 1.0 grade in master's-level Data Engineering and Analysis course during exchange program.

EXPERIENCE

Nutrien India Digital

Associate Technical Product Manager

Oct 2025 - Jul 2026

- **Product Execution:** Partnered with Product & UX to overhaul a legacy landing page, leveraging AI agents to compress a 10-day sprint into 2 days; redesigned content hierarchy, search & filtering to improve information discovery and shipped 80% ahead of schedule.
- **Requirements:** Translated regulatory requirements into detailed PRDs to digitize a manual compliance process, cutting NOI submission processing time 50% through automation while enforcing data validity and preventing invalid work orders from reaching the field.
- **Prioritization:** Negotiated scope for a multi-dimensional pricing calculator supporting ~\$320M in planned revenue ahead of seed-buying season; identified discount-logic risks causing price-quantity mismatches and phased delivery to protect the launch window.
- **Ownership:** Challenged a patch-and-fix approach projected to miss the deadline; drove a full rewrite despite team pushback, shipping on time and cutting recurring bugs from 7+/week to 1-2/week, the team's most stable, maintainable version.

Product-Focused Software Engineer

Jun 2023 - Oct 2025

- **Optimization:** Diagnosed a critical performance bottleneck affecting user retention; improved planning feature load times ~76% (17s → 4s) through targeted UI and API optimizations, enhancing enterprise user experience.
- **Scaling:** Built an onboarding framework that supported 6x team growth from 5 to 30 members while accelerating new-hire productivity.
- **Planning:** Drove a structured planning initiative across 27+ feature tickets, consolidating duplicated logic to reduce planned effort from 24 to 8 story points and establish clear requirements with near-zero iteration.
- **Enablement:** Led domain onboarding sessions as the team scaled 6x, rapidly familiarizing new hires with niche terminology and product workflows.
- **Efficiency:** Identified technical debt slowing delivery; redesigned the UI into reusable modules, reducing component complexity 40% and accelerating feature delivery 30% across product lines.

John Deere India

Graduate Engineer Trainee

Jul 2022 - Jun 2023

- **Innovation:** Spearheaded 2 John Deere Global Hackathons, automating reporting across 500M+ data points with Databricks EDA; productionized department-wide, eliminating manual processes and enabling data-driven decisions.
- **Reliability:** Architected fault-tolerant pipelines processing 150M+ records daily, achieving zero data loss and reducing downstream errors 95% across 5+ teams through custom data-integrity algorithms.
- **Mentorship:** Mentored 8 interns as one of the team's youngest members, achieving a 100% full-time conversion rate.
- **Leadership:** Led enterprise DEI initiatives reaching 500+ employees through published content, awareness sessions, and engagement programs.

PROJECTS

Master Data Directory - Internal Hackathon, 2nd of 17 teams:

- During a company-wide ERP migration to SAP, early data-quality issues meant non-technical roles like Product, UX, Testers, and Managers had to manually query data just to check something as simple as a branch's reporting hierarchy; directed a 4-day hackathon team to build a faster, more reliable reference tool instead.
- Built a Next.js app pulling from multiple data sources into one searchable lookup for branch, grower, and user hierarchies; deliberately kept the dashboard to surface-level numbers rather than full analytics, betting that accurate, reconciled data mattered more to users than a polished interface.
- Productionized after the hackathon; became the tool Product Owners and Testers turned to for pinpointing data issues during development-cycle outages, used across the 150-person digital organization.

SKILLS

Technical Fluency: Python, TypeScript, React, AWS, Databricks, GraphQL, Node.js, CI/CD

Product & Strategy: Product Requirement Documents (PRDs), Design Thinking, User Stories, Scope Negotiation, Market & Document Analysis.

Process & Collaboration: Agile/Scrum, Jira, Confluence, Figma, Datadog, AI/LLM Tools, SharePoint, Kiro, Word, PowerPoint.

Certifications: Design Thinking, Scrum Foundation Professional Certificate (SFPC), Six Sigma White Belt, Intercultural Training.
